

# ACH Manager

***Business Online users have access to ACH Manager, a powerful automatic clearing house tool that saves time and maximizes day to day cash flow.***

ACH Manager is a complete end-to-end transfer solution.

Perform a variety of functions, such as payroll, accounts payable, and other important fund transfers which are securely executed and tracked.

ACH Manager has a user-friendly platform which works with the major internet browsers. There is nothing to download or install; simply log-on to Business Online and select ACH Manager from the Management Tools.

Business owners can customize their ACH Manager experience in many ways, including setting up dual control, limiting access for users and set-up recurring ACH payments. Quality control monitors files to make sure they are prepared correctly before they are sent. If you currently have ACH software which creates NACHA files, these can be easily transmitted through ACH Manager for processing.

For added convenience, connect to our Mobile Business App, which delivers real-time email alerts and allows users to manage, view, and approve ACH activity.
